OpenStack projects communicate in English, and our documentation is written in US English. However, many documentation contributors have English as a second (or third, or fourth) language. This poses many challenges for non-native English speakers, but there are some things that native English speakers can do to make it easier to include non-native speakers in our community. This chapter contains some suggestions for both native and non-native English speakers to help make our community more inclusive and welcoming for all people.

Note

This chapter was written based on the wonderful talk given by Masayuki Igawa, Dong Ma, and Samuel De Medeiros Queiroz at linux.conf.au in 2017. Thank you for their permission to use this content, and for their feedback and support during development. You can watch their original talk on YouTube: [Non-native English speakers in Open Source communities: A True Story](#) or read their article on opensource.com: [Tips for non-native English speakers working on open source projects](#).
